

ENERGY AVAILABILITY

WHAT IS IT?

Energy availability (EA) is the amount of dietary energy remaining for essential functions (heart, brain, bone, etc.) after accounting for the energy expended during training.

Intake EA* =

Energy _ Exercise Energy **Expenditure**

Fat Free Mass

*This is the formula as defined in the literature and not intended for athlete self-assessment.

IMPACT ON PERFORMANCE?

When the amount of energy remaining is too low, your body is forced to compensate by slowing down or decreasing some functions such as hormone production and muscle repair in order to conserve energy. When this happens, adaptation to training may be impaired resulting in poorer performance and a higher risk of injury.

WHO IS AT RISK?

Athletes need to manage their energy requirements to support health and performance. This means all athletes are at risk for low EA. Being in low EA can be caused by both intentional or unintentional energy restriction, putting athletes who participate in aesthetic and weight sensitive sports, those with a history of disordered eating, and athletes in sports with very high training volumes at greater risk.

LOW ENERGY AVAILABILITY CAN CAUSE:

POOR HEALTH

due to a higher risk of:

Illness

Status

depression

reproductive health

Reduced bone Quality

upset

POOR PERFORMANCE

due to lower:

Muscle strength

storage

capacity

Focus and coordination

Energy levels

If you think you or someone you know may have low EA, consult a sport dietitian or doctor. They can help manage energy availability to optimize performance and health.

SELF ASSESSMENT

Ask yourself the following questions to see if you may be in low energy availability:

SLEEP? 2. AM I EXCESSIVELY SORE AND FEELING LIKE I CAN'T

1. DO I FEEL TIRED ALL THE TIME EVEN WHEN GETTING ADEQUATE

QUITE RECOVER BETWEEN TRAINING SESSIONS?

RATE MY COACHES ARE EXPECTING?

4. IS MY MOOD LOW OR FLUCTUATING?

3. IS MY PERFORMANCE FAILING TO IMPROVE AT THE

5. HAVE I HAD REOCCURRING INJURIES IN THE LAST YEAR?

6. HAVE I EVER HAD A STRESS FRACTURE?

8. FEMALES: IS MY MENSTRUAL CYCLE IRREGULAR,

9. MALES: IS MY LIBIDO LOWER THAN NORMAL?

7. AM I FREQUENTLY ILL OR SICK?

LIGHTER THAN NORMAL, OR ABSENT?

talk to a sport dietitian, doctor, or another trusted individual about low energy availability.

If you answered "yes" to any of the above questions,
